

## Watermarks

The watermark will appear on renders if Arnold can't find a license.

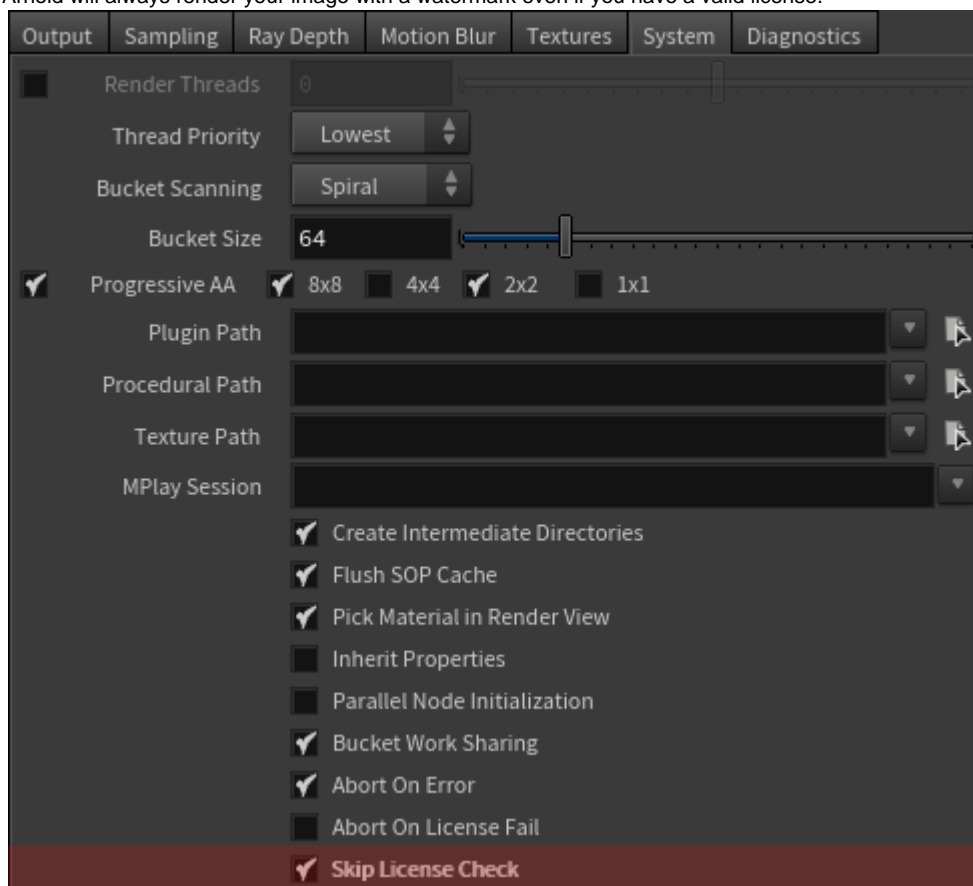

### Get a license

To remove the watermark a license server needs to be installed and valid license running. See the [Licensing](#) page for more information.

### I've got a license but the watermarks are still there

If the watermarks are still there, go to the **Arnold ROP System** tab and verify **Skip License Check** is disabled. With this setting enabled Arnold will always render your image with a watermark even if you have a valid license.

### But I don't want any watermarks ever

When running on a farm, you sometimes prefer the render to fail entirely when no license is available than have watermarked images. Tick the **Abort On License Fail** option to enable this behavior.
