

# Arnold Render Settings

When Arnold is the currently selected renderer in CINEMA 4D, the **Render Settings** dialog will give access to Arnold settings.

These are global settings which control the behavior of Arnold rendering throughout the scene (there are also [per-object settings](#), accessed via the **Attribute Manager**).

To access the **Render Settings**, either click the Render Settings window icon  or choose **Render > Edit Render Settings**.

Change the **Renderer** to **Arnold Renderer**.

The **Main** tab provides access to the parameters that control render quality, lights, textures, etc.

The **System** tab provides general system-wide controls, e.g search paths, licensing, etc.

The **AOVs** tab allows you to select [Arbitrary Output Variables](#) (passes).

The **Diagnostics** tab helps you monitor, troubleshoot and optimize your Arnold renders.
