

Watermarks

The watermark will appear on renders if Arnold can't find a license.

 Only those renders run by batch (BackBurner) are watermarked without a license. Renders run from inside 3ds Max are not watermarked.

Get a license

To remove the watermark a license server needs to be installed and valid license running. See the [Licensing](#) page for more information.

I've got a license but the watermarks are still there

If the watermarks are still there, go to the [Render Setup](#), and in the [System](#) tab, verify **Skip License Check** is disabled. With this setting enabled Arnold will always render your image with a watermark even if you have a valid license.

But I don't want any watermarks ever

When running on a farm, you sometimes prefer the render to fail entirely when no license is available than have watermarked images. Tick the **Abort On License Fail** option to enable this behavior.
